

1) What are the features of python ?

Python is a **high-level, easy-to-learn programming language**.

Some important features are:

1. **Easy to Learn** – Python has simple and readable syntax, so beginners can learn it easily.
2. **Easy to Read** – Python code looks close to normal English, making it easy to understand.
3. **Free and Open Source** – Python is free to use, and its source code is publicly available.
4. **High-Level Language** – We don't need to manage low-level computer operations like memory management directly.
5. **Interpreted Language** – Python executes code line by line, which makes testing and debugging easier.
6. **Dynamically Typed** – We don't need to specify the data type of a variable while creating it.

```
name = "Rahul"  
  
age = 20
```
7. **Object-Oriented** – Python supports concepts like classes, objects, inheritance, and polymorphism.
8. **Large Library Support** – Python provides many built-in and external libraries such as **NumPy, Pandas, Matplotlib and TensorFlow**.
9. **Portable** – Python programs can run on different operating systems such as Windows, Linux, and macOS with little or no change.
