

1. Write a Program to create a class named as Product.

```
class Product:
```

```
    def __init__(self, id):
```

```
        self.id = id
```

```
    def get_details(self, name, price, qty):
```

```
        self.name = name
```

```
        self.price = price
```

```
        self.qty = qty
```

```
    def display(self):
```

```
        print(self.id)
```

```
        print(self.name)
```

```
        print(self.price)
```

```
        print(self.qty)
```

```
p = Product(101)
```

```
p.get_details("Laptop", 50000, 2)
```

```
p.display()
```
